RED (632.8 nm) HELIUM NEON LASERS

JAIN LASERTECH PVT. LTD. offers Helium Neon lasers operating at 632.8nm (red) with nominal output powers of : 2.0 mW, 5.0 mW, and 7.0 mW. Special features include :

Shelf Life : 10 years
Operating Life : 22,000 hours
Free Replacement : 12 months

These lasers incorporate patented symmetrical cathode design that provides exceptional pointing stability. Precision moulded preform frit seal is used for reliable zero-leak hard seals. A zirconium aluminium alloy getter is activated to remove trace gas residues.

Mode : TEM₀₀, Beam Dia : 1.0mm, Beam Div : 1.0mrad. Choice of polarization : Random or Linear.

For **cylindrical** laserheads (where powersupply is seperate), kinematic mount is available as option. Otherwise, choose **Self-contained** models as shown in the photograph here. Further, besides Red, other models are available in Green, Yellow and Orage colours. They serve as low cost sources of well-defined monochromatic wavelengths so very useful for studying characteristics of optical elements and materials using either the reflective or the transmissive properties.
